I have some methods that are too long. How can I refactor them in a way that they fit better the presentation model which is driving them? A: Create an Interface which each method implements and use as a dependency. I can't think of any other way to make the code cleaner. If the methods are part of the same class then maybe you should extract the common code to an intermediate class. Alternatively you could extract the common code to a Base class or a Utility class which could be used by both methods and added on to in the future. However the implementation would not change. /* Copyright Oliver Kowalke 2009. Copyright Thomas Sailer 2013.
